ABSTRACT

The initial stage conducted by community service students' group 26 is to follow the routine activities of the community, then tuck into socialization about the importance of public awareness of health protocols in routine daily activities in the pandemic period. Community Service group 26 follows community study activities by always obeying health protocols. The study activity begins with the reading of sholawat by mothers - mothers of study. However, students of community service group 26 always directed the community to keep their distance and use hand sanitizer. Community service group 26 also provides socialization about health protocols to the banana horn farming group of prosperous sari blooms. So that they are aware of the importance of health protocols when doing activities outside the home.

Keywords: Health protocol; Pandemic Period; Awareness;

INTRODUCTION

Community Service is an activity that is carried out every year at the university, but for this time, the report and Community Service is carried out by BINA BANGSA University and Community Service is carried out in various places and one of the places is carried out in the village of Liwik Kec. Gunung Sari, by doing various activities such as following community activities and socialization about the importance of health protocols.

Community Service is a form of absolute devotion of students to the community. In their community service activities, students provide knowledge, technology, art, and religious experience to provide direction to solve problems and overcome them appropriately.

Luwuk village has many potentials that can be developed: tourist attractions, routine activities, and several MSMEs. However, public awareness in Luwuk village towards the covid-19 pandemic is still deficient. Therefore, community service group 26 held socialization about the importance of health protocols in this pandemic period in every community activity.

Covid-19 or Coronavirus Disease-2019 is an infectious disease caused by acute respiratory syndrome coronavirus 2 (severe acute respiratory syndrome coronavirus two or SARS-CoV-2), which was only discovered in late 2019. This virus belongs to a large family of coronaviruses that can attack animals and humans. Who said that since its discovery spread widely, the virus has resulted in a global outbreak that has lasted to date and caused the world to enter a global emergency. Covid-19 is becoming a serious world problem with the number of cases always on the rise.

The global pandemic that is sweeping the world also occurs in Indonesia. This makes many parties try to participate in overcoming the conditions that are happening. Medical personnel spoke up to give explanations and appeals to the public to maintain harmony and implement preventive measures or health protocols. The main properties of covid-19 are respiratory tract diseases and viral infections. The spread of coronavirus occurs mainly through droplets or splashes from the nose or mouth when coughing, sneezing, or talking. Transmission through droplets can occur in close contact and a splash from the nose or mouth with a person who may be infected. Spread can also occur in indirect contact through contact with the surface of objects used by an infected person.

Community participation is the willingness of the community to implement preventive measures so that the spread of covid-19 does not increase. However, public awareness is still lacking in implementing health protocols, especially in using masks when doing activities outside the home. In addition, the community has also not fully implemented health protocols to maintain physical distance, so the use of masks becomes very important when moving outside the home.

The low awareness of the people of Luwuk Village using masks is influenced by lack of understanding and the attitude of the people's foolishness to comply with health protocols to prevent the transmission of covid-19. So that there need to be other activities that can support the maximum efforts to increase awareness of the people of Luwuk Village to comply with health protocols, namely by socializing from house to house to the community about the importance of using masks when doing activities outside the house, frequent hand washing, using hand sanitizer, and maintaining physical distance when in crowded places. In addition to socialization, the practice of using the suitable mask also needs to be done to educate the public on how to use the correct mask to ensure the use of effective masks to prevent increased transmission of covid-19.

By sharing and socializing the use of masks massively to the people of Luwuk Village is expected to be able to increase public awareness to comply with health protocols to suppress the spread of covid-19.

This socialization is done by way of community service students' group 26 follow the routine activities of the community and then while socializing about the importance of health protocols in doing all activities outside the home

METHOD

Students of Bina Bangsa Banten University (UNIBA) Community Service group 26 held a Socialization on The Health Protocol of the spread of covid-19 and Handanitizer Handanitizer Submission to The Chairman of the Assembly Ta'lim Darul Ikhwan as well as the chairman of the banana horn farming group mekar sari Sejahtera Kp. Tenjolaut Luwuk Kec. Gunung Sari Kab. Serang Banten Province. (July 27, 2021)

Community Service group 26 participates in community study activities by always obeying health protocols. The study activity begins with the reading of sholawat by mothers - mothers of study. However, community service students' group 26 always direct the community to keep their distance and use hand sanitizer.

At the time of the reception session or material in the study of the majlis ta'lim Darul Ikhwan. The most common thing done in community service group 26 Thematic Covid-19 assisted by the village head is to briefly provide education and then explain and division of Masker and Hand sanitizer to the surrounding

community. By the covid-19 rules, community service students' group 26 conduct counseling by providing directions and explanations about the Covid-19 health protocol when the community conducts study activities

KKM Students Attend Regular Studies at Majlis Ta'lim Darul Ikhwan Kp.Tenjo Laut Luwuk Village

Hand Sanitizer Kkm 26 Handover to Council Chairman Ta'lim Darul Ikhwan

On Wednesday night, community service group 26 Bina Bangsa Banten University handed hand-sanitizer to the chairman of Majlis Ta'lim Darul Ikhwan and the head of the banana horn farming group mekar sari Sejahtera. This activity is based on the common understanding of citizens of health protocols about Covid-19.

Hand sanitizer distribution activities aim to prevent coronavirus transmission in the community in the face of PPKM (Community Activity Restrictions) that began to be applied in various regions of Java and Bali.

The most common thing to do in community service group 26 Thematic Covid-19 is to briefly provide education and then explain and divide Masker and Hand sanitizer to the surrounding community. By the covid-19 rules, namely at home only, community service students' group 26 conduct counseling by providing directions and explanations about the Covid-19 health protocol.

"This activity is very beneficial for the community, I really appreciate and fully support the activities carried out by KKN students, and I hope the Community can realize and always apply health protocols in this PPKM period," said, Chairman of the council ta'lim Darul Ikhwan as well as chairman of the banana horn farming group blooming sari Sejahtera H.dofi.

Socialization of health protocol to the Banana Horn Farmers Group Mekar Sari Sejahtera.

Community Service group 26 provides socialization about health protocols to the banana horn farmers blooming prosperous juices. So that they are aware of the importance of health protocols when doing activities outside the home. (July 28, 2021)

I am starting from washing hands, using hand sanitizer, maintaining distance, consuming vegetables and fruits, and adding vitamins to maintain immunity to avoid covid 19. The farming group community is very enthusiastic when given direction or socialization about health protocols.

Because in this pandemic period, in addition to maintaining health protocols in the activity, we also have to consume healthy and nutritious foods so that the body's immunity is always maintained.

CONCLUSION

Students of Bina Bangsa Banten University (UNIBA) Community Service group 26 held a Socialization on The Health Protocol of the spread of covid-19 and Handanitizer Handanitizer Submission to The Chairman of the Assembly Talim Darul Ikhwan as well as the chairman of the banana horn farming group mekar sari Sejahtera Kp. Tenjolaut Luwuk Kec. Gunung Sari Kab. Serang Banten Province. (July 27-28, 2021)

The most common thing done in the Community Service group of 26 Thematic Covid-19 is to provide education briefly and then explain the division of Masker and Hand sanitizer to the surrounding community. By the covid-19 rules, community service students' group 26 conduct counseling by providing directions and explanations about the Covid-19 health protocol to mothers and groups of bananas horn farmers blooming in their routine activities.
